**DETAILED ACTION**

***Election/Restrictions***

**DETAILED ACTION**

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-17 and 24-29, drawn to motor structure, classified in class 310, subclass 89.
- II. Claims 18-23 and 30-35, drawn to a manufacturing method, classified in class 29, subclass 596.

The inventions are distinct, each from the other because of the following reasons:

Inventions of group 1 and group 2 are related as process of making and product made.

The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the process can be used to make a materially different product. The process of degreasing, treating with phosphoric acid, cleaning, plating a metal layer, coating the layer with a chromate film, coating with a phosphoric acid anodic film and an organic resin coating can be used to a corrosion resistant metal to be used for something other than electric equipment.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

A telephone call was made to Vincent Sunderdick on 25 September 2003 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
